Acknowledgements

The Community Health Needs Assessment (CHNA) process requires significant dedication from those community members and organizations who are committed to identifying and addressing health problems within our communities to improve the quality of life for our residents. It is essential that the CHNA team involve people who have significant influence in the county, as well as the people most affected by health issues. People from throughout the county must be mobilized during this process, therefore, a broad representation of county residents, agencies, and organizations were invited to be a part of this process. Thank you to our community partners who contributed to the 2022 CHNA process:

Executive Summary

Partnerships/Collaborations

Hyde County Health Department	Luana Gibbs (Health Director), Anna Schafer (Health Education Director), Melissa Sadler (Nursing Supervisor), Misty Gibbs (Preparedness Coordinator), Emma Williams (Nurse Practitioner), Roni Collier (Environmental Health Specialist)
Hyde County Behavioral Health	Mike Wheeler (Peer Support Specialist, Post-Overdose Response Coordinator)
Hyde County Cooperative Extension	Natalie Wayne (Hyde & Tyrrell Extension Director), Lee Brimmage (4-H Youth Development Extension Agent), CatieJo Black (Family & Consumer Sciences Extension Agent)
Hyde County Hotline	Kathy Ballance (Executive Director), Rhonda Ballance (Client Services Advocate)
Hyde County Department of Social Services	Laurie Potter (Director)
Hyde County Sheriff's Office	Guire Cahoon (Hyde County Sheriff)
Hyde County EMS	David White (EMS Director)
ECU Health Beaufort Hospital	Pam Shadle (Director of Marketing, Community Outreach and Development), Kelly Ange (Community Health Improvement Coordinator)
ECU Health Cancer Care	Jennifer Lewis (Outreach Coordinator)
Hyde County Schools	Alison Etheridge (Mattamuskeet Elementary School Principal), Clare Senseney (21st Century After School Coordinator), Desiree LaPorte (Social Worker), Julio Morales (English as a Second Language (ESL) Teacher, District Public Information Officer) Elaya Johnson (21st Century Community Learning Center Program Manager), Stephanie Stewart (School Nurse), Flavia Burton (ESL Teacher), Gwen Austin (Social Studies/Health Teacher), Kristi Gibbs (Guidance Counselor), Mary McKnight (Guidance Counselor), Leslie Cole (Principal, Ocracoke School), Mary Frances Hamrick (Guidance Counselor), Melissa DiMarsico (Health & Physical Education Teacher), Tekisha Jordan (Student Support Services Administrative Assistant, NC Pre-K Administrator), Wesley Creef (Physical Education Teacher), Wesley Floyd (Early College High School Principal), Stephen Basnight (Hyde County Schools Superintendent)
County of Hyde (Administration)	Kris Noble (County Manager), Donnie Shumate (Assistant County Manager), Earl Pugh Jr. (Hyde County Board of Commissioners Chairman)
Beaufort-Hyde Partnership for Children	Jessica Burnham (Director)
Albemarle Regional Health Services	Teresa Beardsley (Region 9 Tobacco Prevention Manager)
Project DIRECT Legacy for Men & Their Families	Christine Davis (Secretary), Archie Green (Co-Chairman)
Hyde Transit	Beverly Paul (Director)
Engelhard Medical Center	Jamie Jones (Clinical Manager)
Ocracoke Health Center	Amanda Cochran (Clinical Nurse Manager)
ECU Health	Latrice Peele (Hyde County Community Health Worker)

Regional/Contracted Services

Hyde County received support in conducting the CHA from Health ENC, which is a partnership between public health agencies, hospitals, and other key partners in Eastern North Carolina with the shared goal of improving the health and wellbeing of our residents. Health ENC is a program of the Foundation for Health Leadership & Innovation (FHLI), a nonprofit organization focused on improving health in North Carolina. FHLI helps Health ENC in building its network and enhancing its overall impact. Health ENC coordinates a regional CHNA in 35 counties of eastern North Carolina, and its Program Manager works to build coalitions and partnerships that will address health issues identified through the regional CHA process. Initiated in 2015 by the Office of Health Access in the Brody School of Medicine at East Carolina University, Health ENC grew out of conversations with health care leaders about improving the CHNA process in eastern North Carolina. You can learn more by visiting <https://www.healthenc.org/>. For the 2022 CHNA process, Health ENC coordinated regional community survey efforts, as well as secondary data collection, report template creation, and more.

Theoretical Framework/Model

The Hyde County Health Department utilizes the eight-phase assessment process described in the North Carolina Department of Health and Human Services, Division of Public Health's Community Health Assessment Guide Book. This Guide Book is a step-by-step manual for community-based health assessment that provides tools for collecting county level data, worksheets for analyzing the data, data interpretation tips, guidelines for prioritizing local health needs, and community health planning aids. The eight phases of the assessment process are as follows:

- Phase 1: Establish a community health assessment team
- Phase 2: Collect primary data
- Phase 3: Collect secondary data
- Phase 4: Analyze and interpret data
- Phase 5: Determine health priorities
- Phase 6: Create the CHNA document
- Phase 7: Disseminate the CHNA document
- Phase 8: Develop community health improvement plans

Results-Based Accountability™ (RBA) will be employed when developing Hyde County's Community Health Improvement Plans. RBA uses a data-driven, decision-making process to help communities and organizations get beyond talking about problems to taking action to solve problems. It is a simple, common-sense framework that everyone can understand. RBA starts with ends and works backward, towards means.

Collaborative Process Summary

Hyde County's collaborative process occurred at both regional and local levels. Health ENC supports regional assessment efforts and creates a platform for information sharing between similar counties in the eastern North Carolina region. Regional discussions about the CHNA began in early 2021. Primary data collection began in early April 2021 and concluded in late June 2021. Secondary data was compiled and analyzed through Health ENC efforts in June 2021, and primary data analysis occurred in July 2021. The local priority setting process commenced on November 18, 2021, when a meeting was conducted with community stakeholders in which a comprehensive list of potential health priorities was created. Subsequently, a survey was distributed to all stakeholders in an effort to vote on the top priorities. (You can find more information on this process in Chapter 10).

Key Findings

Since 2016 the population of Hyde County has been steadily decreasing and is projected to decline further to 4,879 persons for 2029. However, birth rates have been increasing from 2016-2019 which is a promising factor for population growth. Hyde County has been designated as Tier 1 – most distressed status for 2021 and 2022 out of the state’s 100 counties based upon the economic well-being of the county. Nearly a quarter of the population of Hyde County lives below the poverty level, 38% being children. The rate of individuals aged 0-64 years old with health insurance coverage is lower than the rate for North Carolina and the Health ENC region with nearly 18% of the population uninsured. The leading causes of mortality in Hyde County are cancer, heart disease, other unintentional injuries, and chronic lower respiratory diseases. Many of these chronic condition’s death rates are higher than the state and the Health ENC County Region rates. In 2018 Chlamydia was the number one reportable communicable disease in Hyde County, comprising half of all reported cases. According to the primary data low income/poverty is the issue which has the highest impact on the quality of life in Hyde County, followed by drugs (substance abuse) and lack of community resources. Most survey respondents agreed that Hyde County is a good place to raise children and that Hyde County is a good place to grow old. Alternatively, most people believe that Hyde County is not a safe place to live and that there is not enough economic opportunity. Participants also disagreed or strongly disagreed that Hyde County has affordable housing that meets their needs, Hyde County has good parks and recreation facilities, and that it is easy to buy healthy foods in Hyde County. The top three services that respondents ranked as the most need of improvement in their community was culturally appropriate health services, availability of employment, and higher paying employment. When asked about the health behaviors that they felt people in their community needed more information about, the majority of respondents replied with substance misuse prevention, exercising/fitness, elder care, and managing weight. When asked about the top areas where the COVID-19 pandemic has impacted them the most, participants responded with stress and anxiety, social isolation, and mental/behavioral health. Between April 1 and June 30, 2021, nearly 67% of participants reported being vaccinated for COVID-19, while 31% had not been vaccinated. Most participants reported that they do not engage in any physical activity or exercise that lasts at least a half hour a few days each week. Most respondents did not have a problem accessing the healthcare they needed over the last year however 18.2% did have a problem with access to needed healthcare, citing COVID-19 and no health insurance coverage as the main barriers to access. At least one time over the past year 13.4% of respondents were worried about whether their family’s food would run out before they got money to buy more.

Health Priorities

The significant health needs as identified by the county are:

1. Mental Health
2. Substance Use
3. Child Abuse & Neglect

Next Steps

This report describes the process and findings of a comprehensive health needs assessment for the residents of Hyde County, North Carolina, and will be shared with community stakeholders, partners, and the general public. The prioritization of the identified significant health needs will guide community health improvement efforts of Hyde County. Following this process, Hyde County will outline how they plan to address the prioritized health needs in their implementation plan by utilizing Results-Based Accountability™.

Chapter 1 Introduction

Description of County

Hyde County has a total area of 1,424 square miles, 613 miles is land, and 811 miles is water. Adjacent counties are Tyrrell, Dare, Carteret, Pamlico, Beaufort, and Washington County. There are two bodies of water in Hyde County the Pamlico Sound and the Atlantic Ocean. Hyde County is also home to five nationally protected areas. Attractions in Hyde County consist of the Ocracoke Lighthouse, waterfowl hunting, fishing, and Eco-tourism.

Overview of Health ENC

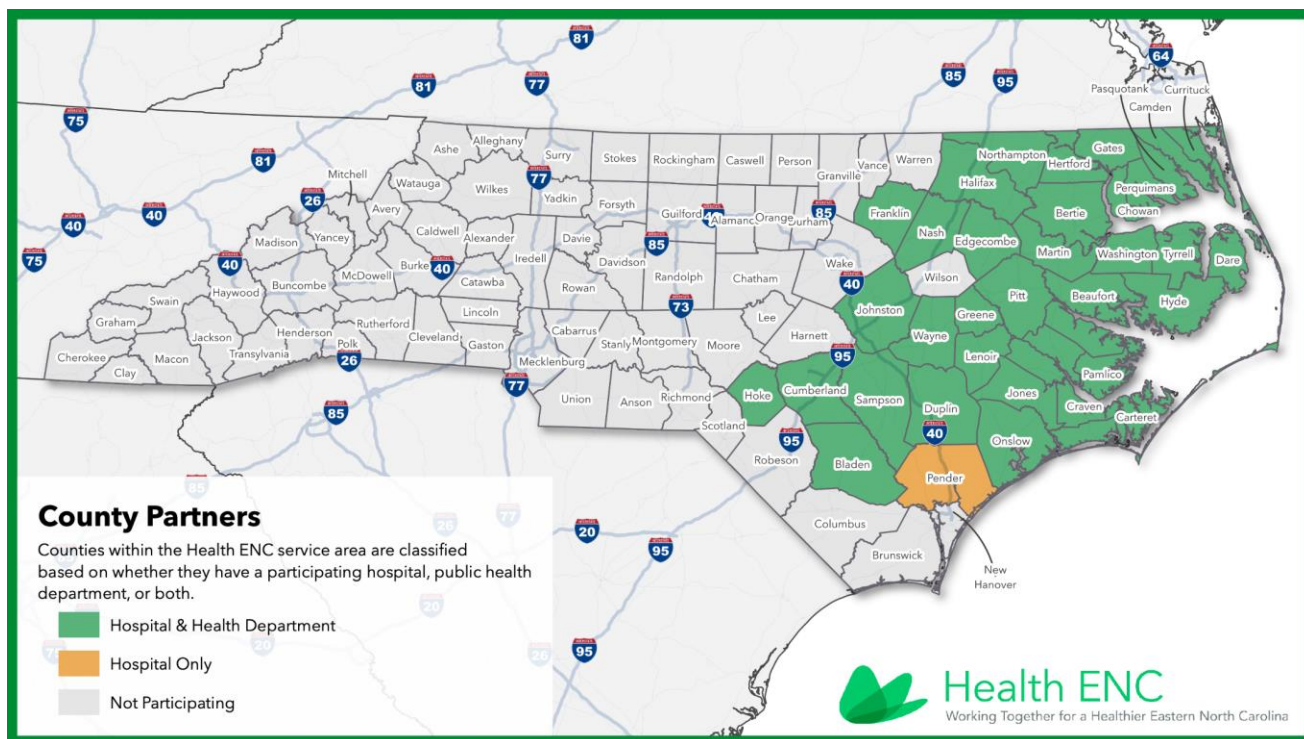

Health ENC is a collaborative initiative of health departments and hospitals in eastern North Carolina. The collaborative serves 35 counties with 34 participating health departments and 31 participating hospitals. The collaborative uses a shared approach for primary and secondary data collection to produce a comprehensive Regional Community Health Needs Assessment every three years that can be used to partially satisfy requirements for North Carolina Local Health Department Accreditation and the Internal Revenue Service requirement under the Patient Protection and Affordable Care Act for charitable hospitals.

Overview of Community Health Needs Assessment Process

The Community Health Needs Assessment Process gathers population health data that county health departments, hospitals, community groups can use to

- Identify key health needs/issues in eastern North Carolina Communities
- Develop strategies and action plans based upon data aim to improve the quality of life
- Collaborate to maximize results by having a collective impact in the region
- Maintain local control and decision-making about the choice of health priorities and interventions, and
- Improve health, partnerships, and communication.

Participating Health ENC Counties

Health ENC serves the following counties: Beaufort, Bertie, Bladen, Camden, Carteret, Chowan, Craven, Cumberland, Currituck, Dare, Duplin, Edgecombe, Franklin, Gates, Greene, Halifax, Hertford, Hoke, Hyde, Johnston, Jones, Lenoir, Martin, Nash, Northampton, Onslow, Pamlico, Pasquotank, Pender, Perquimans, Pitt, Sampson, Tyrrell, Washington, and Wayne Counties.

Health Data Sources

Primary Data – Community Survey

Survey Methodology/Design

Health ENC Steering Committee structured the primary data collection for participating health departments and hospitals. The primary data used in the Community Health Needs Assessments included (1) a community survey that could be distributed online or by a paper submission and (2) focus group discussions in some counties. The Health ENC Steering Committee did not encourage focus groups for the 2021-2022 Community Health Needs Assessments because of the global COVID-19 pandemic. However, some counties were able to hold focus group discussions safely despite significant challenges in collecting enough survey responses to accurately represent their community's population.

Survey Design:

The Health ENC Steering Committee developed a primary survey to gather information from community members about their health concerns. A workgroup of Steering Committee members convened and examined survey questions utilized in the 2021-2022 Community Health Needs Assessment. The workgroup also examined data readily available from secondary data sources. The workgroup focused on developing survey questions to obtain data from community members which was not readily available in the secondary data or where secondary data was weak. In addition, workgroup members worked to combine questions where appropriate and to be more inclusive in the wording of response choices. The Steering Committee reviewed the sample survey questions and made a few additional revisions to assure the survey only contained questions where community input was needed to guide health priority selection and strategic action planning.

Once the survey questions were finalized, the Steering Committee decided on targets for each county. Because the survey was a convenience sample that was being conducted during a global pandemic (COVID-19), each county was asked to complete a minimum of 300 surveys with representation from as many community groups as possible to assure sufficient sampling to represent the full community. The target of 300 surveys per county was identified through previous work with data analysis vendors who examined each county's population and confirmed this number should provide an accurate reflection of the total county's population, if responses reflected the population demographics equally.

Health ENC partners received feedback throughout the survey period on the age, gender, race/ethnicity, and language of survey respondents to assist them in promoting the surveys to various community members within their counties. At the completion of the survey period, 16,661 English surveys and 502 Spanish surveys were completed. Most counties did not have an equally distributed response to surveys to represent their entire county's population. As a result, survey responses should be considered as only one component of information utilized to select health priorities. The most underserved populations' feedback is not adequately reflected in most surveys. Health ENC partners were encouraged to include key stakeholders, who served these populations, in the health priority selection process to assure many of their clients' health needs were considered.

The survey included 25 questions and was made available in paper format and electronically using the REDcap software from April 1 – June 30, 2021. During that 3-month time frame, surveys were distributed at community outreach events, and the online survey link was shared constantly on Hyde Happenings (Hyde County's online newsletter), as well as on social media.

Key Areas Examined

- Quality of life, health behaviors, health perceptions,
- Preventative services, exercise, and access to care

County Responses

- 213 Total English (Total in ENC survey =16,661)
- 6 Total Spanish (Total in ENC survey =502)

Limitations

- The data presented represents a snapshot of the population, and economic and leading health and wellness issues in eastern NC communities
- It includes primary data gathered from community surveys and secondary data from health and other sources.
- This information can be used as a guide for helping communities identify leading health issues in the Health ENC County Region
- Other health issues, data and resources may be available that were not listed here that communities may wish to consider when establishing health priorities

Chapter 2 Demographic Profile

Total Population

- In 2019, Hyde County had a population estimate of 4,937.

Minority Populations

The White population accounts for 66.5% of the total population in Hyde County, with the Black or African American population accounting for 29.7% of the total population. The White population in Hyde County (66.5%) is less than the White population in North Carolina (68.7%) and slightly higher than the Health ENC counties (64.9%). The Black or African American population in Hyde County (29.7%) is higher than the Black or African American population in North Carolina (21.4%) and lower than the Health ENC counties (30.0%). The Hispanic or Latino population comprises 10.3% of Hyde County which is significantly higher than North Carolina (9.4%) and Health ENC Counties (9.6%)

Population Growth

- The projected population decline for Hyde County for 2029 is estimated at 4,879 persons
- From 2010 to 2019, the total population of Hyde County has decreased by an overall 15%

Note: Population projection for 2029 comes from the NC Office of State Mgmt and Budget Pop Projections. All the other population data is from the Census

Age Groups

Military/Veteran Populations

Military Population

In 2015-2019, Hyde County has a share of residents in the military (0.0%) compared to North Carolina (1.1%) and counties in the Health ENC region (4.8%). Across four time periods, the percent of the population in the military for Hyde County is higher than in North Carolina and lower than the Health ENC region.

Veteran Population

The veteran population is given as a percent of the civilian population aged 18 years and older and this data is used for policy analyses, to develop programs, and to create budgets for veteran programs and facilities. Hyde County has a veteran population of 5.1% in 2015-2019, compared to 8.4% for North Carolina and 12.1% for Health ENC counties.

Birth Rates

Birth rates are important measures of population health. The birth rate is usually the dominant factor in determining the rate of population growth; however, population growth is also driven by the age structure of the population (e.g., deaths), immigration and emigration. The Hyde County birth rate demonstrated an overall increase over the period presented, with a differing trend seen in the Region and the state.

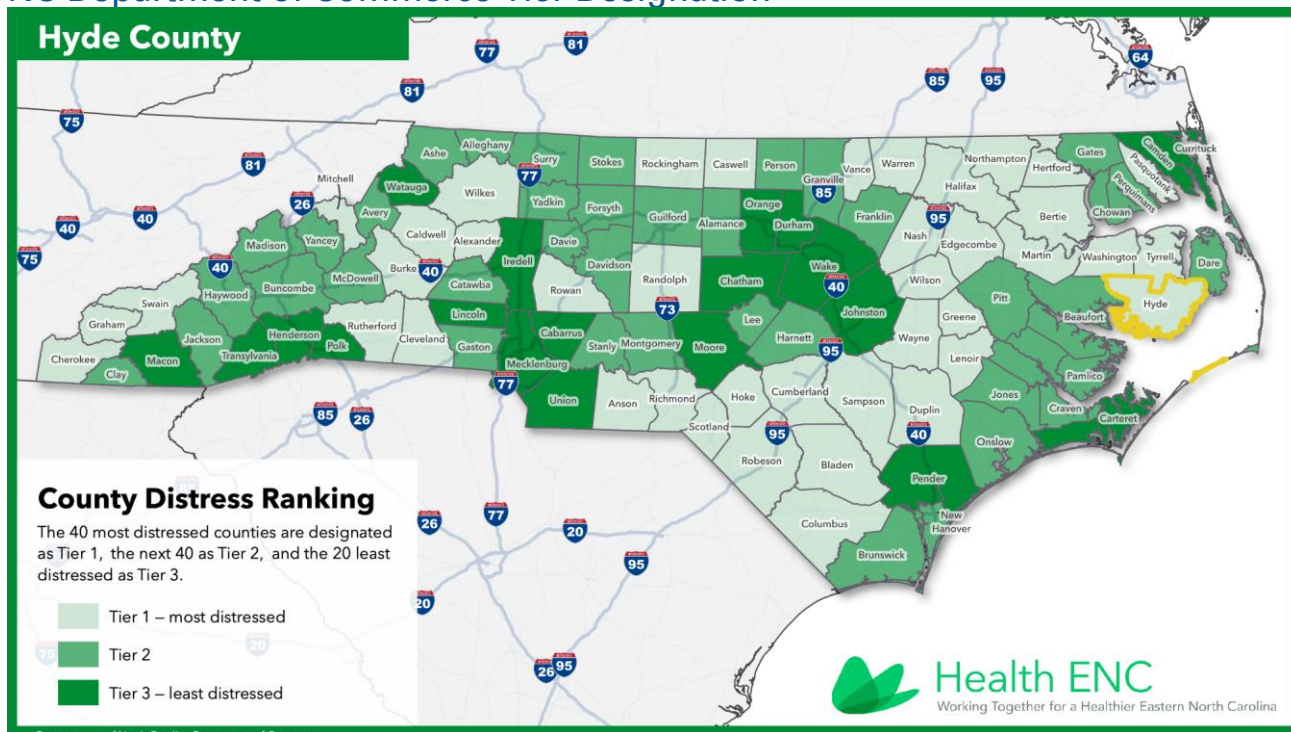

Analysis of Demographic Data

The total population of Hyde County in 2019 was approximately 4,937. The population of Hyde County is estimated to decrease at 4,879 persons over the next decade and has already seen an overall decrease of 15% of the total population from 2010 to 2019. The White population of Hyde County is less than the White population in North Carolina and slightly higher than the Health ENC counties and accounts for almost one-third of the total population. Whereas the Black or African American population in Hyde County is higher than the Black or African American population in North Carolina and less than the Health ENC counties. The Hispanic or Latino population is significantly higher than both North Carolina and Health ENC counties.

The largest percent of the population are ages 35 – 44 with a median age of 41 years. In 2015-2019 Hyde County had a 0% share of residents in the military and a 5.1% share of the veteran population, both which are lower than in North Carolina and for Health ENC counties. Birth rates have been increasing from 2016 – 2019 at a higher rate than seen in the Region and the State.

Chapter 3 Socioeconomic Profile

NC Department of Commerce Tier Designation

The North Carolina Department of Commerce annually ranks the state's 100 counties based on economic well-being and assigns each a Tier designation. The 40 most distressed counties are designated as Tier 1, the next 40 as Tier 2 and the 20 least distressed as Tier 3. Hyde County has been assigned a Tier 1 designation for 2022.

Hyde County has been assigned a Tier 1 designation for 2022.

County Tiers are calculated using four factors:

- Average unemployment rate
- Median household income
- Percentage growth in population
- Adjusted property tax base per capita

Income

Median household income reflects the relative affluence and prosperity of an area. Areas with higher median household incomes are likely to have a greater share of educated residents and lower unemployment rates.

Compared to counties in the Health ENC region Hyde County has a low median household income. In the region, 9 counties have a lower median household income than Hyde County.

- The median household income in Hyde County (\$39,663), which is much lower than the median household income in North Carolina (\$54,602).

Poverty

Federal poverty thresholds are set every year by the Census Bureau and vary by size of family and ages of family members. A high poverty rate is both a cause and a consequence of poor economic conditions. Children in poverty are more likely to have physical health problems, behavioral problems, and emotional problems. Seniors who live in poverty are an especially vulnerable group due to increased physical limitations, medical needs, and social isolation. Persons with a disability are more likely to live in poverty compared to the rest of the population. Without adequate income, individuals with disabilities may not be able to afford necessary expenses, such as rent or mortgage, utility bills, medical and dental care, and food.

- In Hyde County an estimated 24.0% of the population lives below the poverty level, compared to 15.0% of the population in NC and 17.5% for the Health ENC region

Poverty by Race and Ethnicity

Source: U.S. Census Bureau ACS 5-year Estimate
<https://datausa.io/profile/geo/hyde-county-nc#economy>

The most common racial or ethnic group living below the poverty line in Hyde County, NC is White, followed by Black and Hispanic.

The Census Bureau uses a set of [money income thresholds](#) that vary by family size and composition to determine who classifies as impoverished. If a family's total income is less than the family's threshold than that family and every individual in it is considered to be living in poverty.

*Data from [the Census Bureau ACS 5-year Estimate](#).

Children in Poverty

The rate of children below the poverty level is much higher for Hyde County when compared with N.C. and the Health ENC Counties and vice versa for older adults when compared with N.C. and the Health ENC Counties.

Older Adults in Poverty

- The rate of adults age 65+ years living in poverty is 0.3% lower in Hyde County when compared with NC and the Health ENC counties by 1.5%.

Disabled People in Poverty

The Census American Community Survey does not provide an estimate for the percent of disabled people living in poverty for Hyde County.

Housing

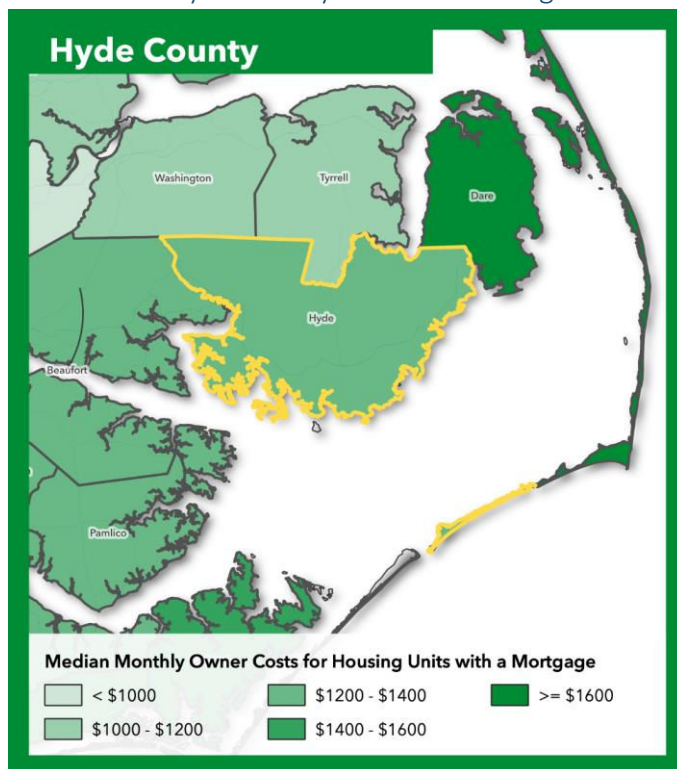

Median Monthly Housing Costs

The average household size in Hyde County is 2.11 people per household (owners) and 2.89 people per household (renters), which is slightly lower than the North Carolina value of 2.57 people per household (owners) but slightly higher for renters (2.43 people per household).

High costs of homeownership with a mortgage can strain both homeowners and the local housing market. This figure shows mortgaged owners median monthly household costs in the Health ENC region. In Hyde County, the median housing costs for homeowners with a mortgage is \$1,249. This is slightly lower than the North Carolina value of \$1,314 and is lower than 13 counties in the Health ENC region.

Median Monthly Household Costs in Hyde County and Surrounding Counties

Severe Housing Problems

- Safe and affordable housing is an essential component of healthy communities, and the effects of housing problems are widespread.
- Housing problems include overcrowding, high housing costs, lack of kitchen, or lack of plumbing facilities
- Slightly more than 14.0% of households in Hyde County have severe housing problems, compared to 15.0% in North Carolina and 16.1% in Health ENC Counties.

Food Insecurity

Households with SNAP Benefits

The Supplemental Nutrition Assistance Program (SNAP) is a federal assistance program that provides low-income families with electronic benefit transfers (EBTs) that can be used to purchase food. The goal of the program is to increase food security and reduce hunger by increasing access to nutritious food.

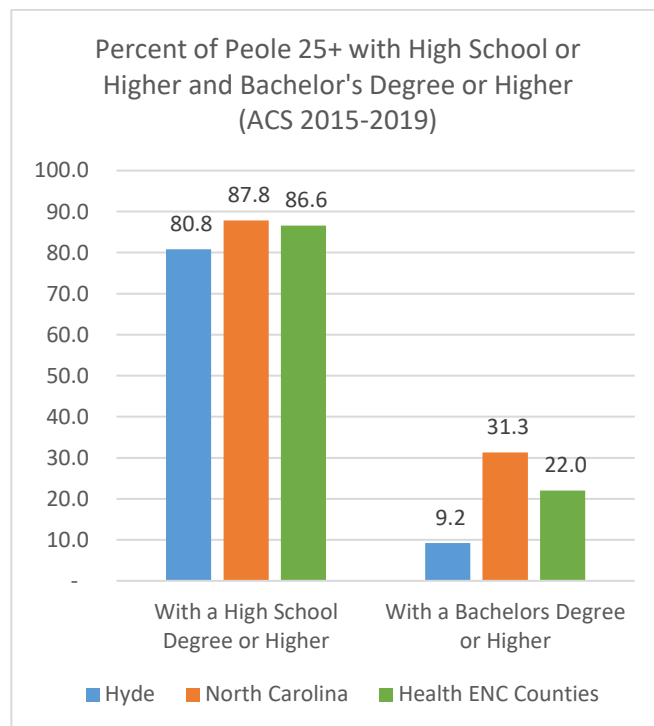

This figure shows the percent of households with children that participate in SNAP. The rate for Hyde County, 20%, is slightly higher than the state value of 13% and the Health ENC region value of 16.7%.

Education

Educational Attainment

Graduating from high school is an important personal achievement and is essential for an individual's social and economic advancement. Graduation rates can also be an important indicator of the performance of an educational system. Having a bachelor's degree opens up career opportunities in a variety of fields and is often a prerequisite for higher-paying jobs.

- In Hyde County the percent of residents 25 or older with a high school degree or higher was lower (80.8%) than the state value (87.8%) and the Health ENC region (86.6%)
- Percent with a higher education attainment in Hyde County was lower (9.2%) compared to N.C. (31.3%) and Health ENC region (22.0%)

High School Drop Out Rate

High school dropouts earn less income than high school and college graduates and are more likely to be unemployed. High school dropouts are generally less healthy and require more medical care. Further, high school dropout rates are linked with heightened criminal activity and incarceration rates, influencing a community's economic, social, and civic health.

- Hyde County's high school dropout rate was 0.7% in 2019-2020, which is lower than the rate in North Carolina (1.5%) and the Health ENC region (1.4%)
- Hyde County's high school dropout rate has been on a decline over the past four measurement periods

High School Suspension Rate

High school suspension is a form of discipline in which a student is temporarily removed from a classroom and/or school due to a violation of school conduct or code. Higher rates of suspension can be related to high rates of antisocial or delinquent behaviors, which may further contribute to potential future involvement in the juvenile justice system. Additionally, schools with higher suspension rates have higher rates of law or board of education violations and generally spend more money per student.

- Hyde County's rate of high school suspension (31.4 per 100 students) was higher than North Carolina's rate (11.6) but lower than the Health ENC counties (15.5) in 2019-2020

Transportation

Public transportation offers mobility, particularly to people without cars. Transit can help bridge the spatial divide between people and jobs, services, and training opportunities. Public transportation also reduces fuel consumption, minimizes air pollution, and relieves traffic congestion. Walking to work helps protect the environment, while also providing the benefit of daily exercise.

- In Hyde County, an estimated 0.4% of residents commute to work by public transportation, compared to the state value of 1.0%. Approximately 2.3% of residents walk to work, which was higher than the state value of 1.8%. An estimated 79.2% of workers 16 and older drive alone to work, compared to 80.9% in N.C.

Crime and Safety

Both violent crime and property crime are used as indicators of a community's crime and safety. Violence negatively impacts communities by reducing productivity, decreasing property values and disrupting social services. Violent crime includes four offenses: murder and non-negligent manslaughter, rape, robbery, and aggravated assault. Property crime includes the offenses of burglary, larceny-theft, motor vehicle theft, and arson.

- From 2016 to 2018, the violent crime rate in Hyde County decreased from 183.5 to 86.1. Data for 2019 were unavailable
- During the same time period, the property crime rate decreased from 2362.1 to 2051.1, which was lower than the N.C. rate

Juvenile Crime

Youth who commit a crime may not gain the educational credentials necessary to secure employment and succeed later in life. Negative peer influences, history of abuse/neglect, mental health issues, and significant family problems increase the risk of juvenile arrest. The juvenile justice system aims to reduce juvenile delinquency through prevention, intervention, and treatment services.

The undisciplined rate describes juveniles who are unlawfully absent from school, regularly disobedient and beyond disciplinary control of the parent/guardian, are regularly found where it is unlawful for juveniles to be or have run away from home for more than 24 hours.

The 2017 juvenile undisciplined rate in Hyde County (0.28) was lower than the rate in North Carolina (1.53) and the Health ENC region (1.1).

The juvenile crime rate in Hyde County remained constant from 2018 to 2020. The juvenile delinquent rate for Hyde County (6.49) in 2020 was lower than North Carolina (18.08) and the Health ENC region (21.4).

Child Abuse

Child abuse includes physical, sexual and emotional abuse. All types of child abuse and neglect can have long lasting effects throughout life, damaging a child's sense of self, ability to have healthy relationships, and ability to function at home, at work, and at school.

The child abuse rate in Hyde County has been inconsistent over the past three measurement periods. The 2018 child abuse rate in Hyde County (9.2 per 1,000 population) was higher than North Carolina (8.0) and the health ENC (8.8)

Incarceration

According to the U.S. Bureau of Justice Statistics, approximately one out of 100 adults in the U.S. are in jail or prison. Conditions in jails and prisons can lead to an increased risk of infectious diseases such as tuberculosis and hepatitis C, as well as assault from other inmates. After incarceration, individuals are likely to face a variety of social issues such as employment discrimination, disruption of family relationships and recidivism.

- Over the past four measurement periods, the incarceration rate in Hyde County has decreased except for 2019-2020 when it went up
- In 2019-2020, the incarceration rate in Hyde County was lower (252.7 per 1,000 population) than N.C. (304.2) and the Health ENC region (345.2)

Civic/Political Engagement

Exercising the right to vote allows a community to choose elected officials and hold them accountable. Voting ensures that all citizens have the opportunity to voice their opinions on issues such as the use of tax dollars, civil rights and foreign policy. By voting, individuals shape their communities and influence the next generation of society. A high level of voter turnout indicates that citizens are involved and interested in who represents them in the political system.

- Hyde County has a higher percent of residents of voting age (79.1%) than North Carolina (77.6%) and the Health ENC Counties (77.1%)

Analysis of Socioeconomic Profile

Hyde County has been designated as Tier 1 – most distressed status for 2021 and 2022 out of the state's 100 counties based upon the economic well-being of the county. The median household income of Hyde County is 28% lower than the median household income in North Carolina. Almost a quarter of the population of Hyde County lives below the poverty level. With the most common racial or ethnic group living below the poverty line being White, followed by Black and Hispanic. The rate of children below the poverty line is 17% higher compared with N.C. and 12.5% higher than the Health ENC Counties. The rate of adults age 65+ years living in poverty is 0.3% lower in Hyde County when compared with NC and the Health ENC counties by 1.5%.

The average household size in Hyde County is 2.11 people per household (owners) and 2.89 people per household (renters). This value is slightly compared with North Carolina owners and slightly higher for renters. Mortgage homeowner's average monthly household costs is slightly lower than in North Carolina and in 13 counties in the Health ENC region by an average difference of \$65 per month. Approximately 14% of households in Hyde County have severe housing problems. The rate of households with children that participate in Snap is 20% which is 7% higher than N.C. and 3.3% higher than the Health ENC region.

Hyde County's high school dropout rate has declined over the past four measurement periods and in 2019-2020 was lower than the rate in North Carolina and the Health ENC region by half at 0.7%.

Most workers 16 and older in Hyde County drive alone to work which is slightly lower compared to N.C. Hyde County also had a lower percentage of residents who commuted by public transportation, 0.6% lower compared to N.C. The percentage of residents who walk to work was higher in Hyde County compared to N.C. by 0.5%.

Violent crime in Hyde County has decreased by 53% from 2016-2018 and property crime rate has decreased by 13% during the same time period. The 2017 juvenile undisciplined rate in Hyde County (0.28) was approximately 5 to 4 times lower than the rate in North Carolina (1.53) and the Health ENC region (1.1), respectively. The juvenile crime rate in Hyde County remained constant from 2018 to 2020. The juvenile delinquent rate for Hyde County (6.49) in 2020 was almost 3 times lower than North Carolina (18.08) and the Health ENC region (21.4). The rate of child abuse in Hyde County has been inconsistent over the past three measurement periods. The 2018 child abuse rate in Hyde County (9.2 per 1,000 population) was higher than North Carolina (8.0) and the health ENC (8.8). The incarceration rate in Hyde County has decreased over the past four measurement periods except of for an increase in 2019 – 2020. The incarceration rate in 2019-23020 remains lower than in N.C. and the Health ENC region.

Hyde County has a higher percent of residents of voting age than North Carolina and the Health ENC counties by 1.5% and 2% respectively.

Chapter 4 Clinical Care Profile

Health Insurance Coverage

Medical costs in the United States are very high. People without health insurance may not be able to afford medical treatment or prescription drugs. They are also less likely to get routine checkups and screenings, so if they do become ill, they may not seek treatment until the condition is more advanced, and therefore more difficult and costly to treat.

- Nearly 18% of the population 0-64 years of age in Hyde County are uninsured
- The rate of individuals aged 0-64 years old that have health insurance coverage in Hyde County was 82.8%, which was lower than the rate for North Carolina (87.3%) and the Health ENC region (87.0%)

Government Health Insurance Only Coverage – Medicaid, Medicare, Tricare

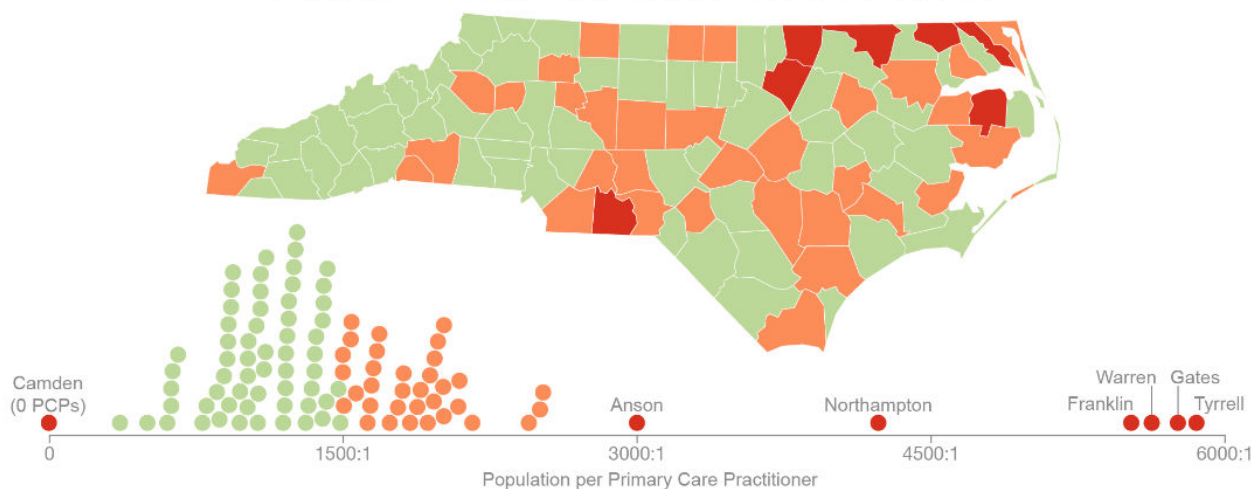

This graph shows the percent of the population only receiving health insurance through Medicaid, Medicare, or military healthcare (TRICARE).

- In Hyde County, 16.4% of the population report receives health insurance coverage through Medicaid, 3.6% Medicare and 0.8% Tricare

Primary Care Practitioners

Population per Primary Care Practitioner, North Carolina, 2017

Notes: Updated March 10, 2020 to reflect adjustments to 2017 nurse practitioner data. Primary care physicians, physician assistants, and nurse practitioners are defined as in Spero, J. C., & Galloway, E. M. (2019). Running the Numbers. North Carolina Medical Journal, 80(3), 186-190. Physicians with a primary area of practice of obstetrics/gynecology were weighted as 0.25 of a full-time equivalent (FTE) primary care practitioner. All other primary care physicians were weighted as 1 FTE. Primary care physician assistants, nurse practitioners, and certified nurse midwives were weighted as 0.75 FTE. Physician and physician assistant data are derived from licensure data provided by the North Carolina Medical Board. This analysis only includes physicians who are not residents-in-training and are not employed by the Federal government. Nurse practitioner and certified nurse midwife data is derived from licensure data provided by the North Carolina Board of Nursing. Data include active, licensed practitioners in practice in North Carolina as of October 31, 2017. Practitioners are assigned to counties based on primary practice location. County populations were adjusted for age and gender according to primary care use rates described in data from the Medical Expenditure Panel Survey. The raw (unadjusted) population data was from the NC Office of State Budget and Management.

**SHEPS HEALTH
WORKFORCE NC**

Access to primary care is necessary to improving the health outcomes of communities. With the recent spread of the novel [coronavirus](#) in North Carolina, primary care is critical as an entry-point to further care. Many rural areas of North Carolina lack adequate access to primary care providers. The disparities in access between rural and metropolitan areas have continued to grow despite an overall increase of physicians in NC.

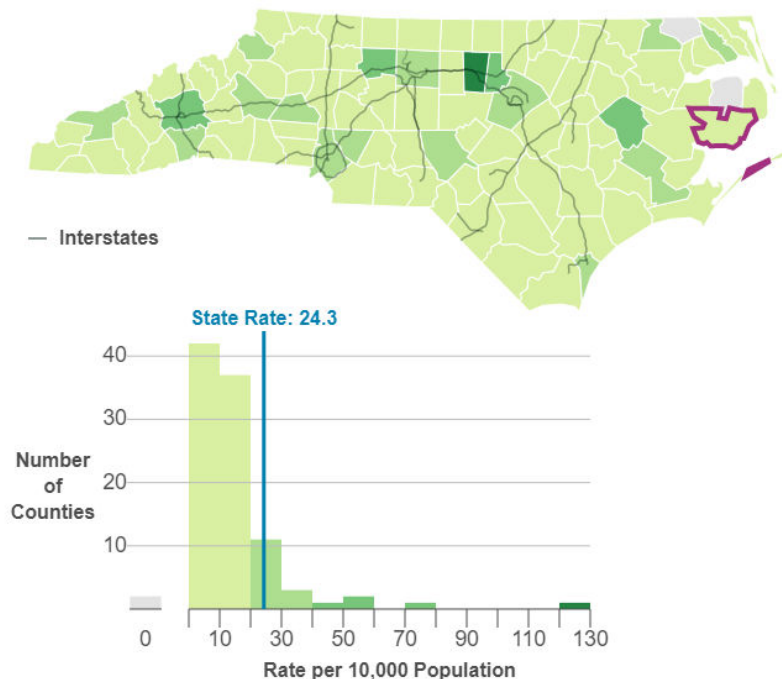

On the map above, Hyde County is shaded in orange, a color that indicates the county is close to, but not quite, meeting the NC Institute of Medicine's (NCIOM) target ratio of 1 primary care provider to every 1,500 people.

Currently, 60% of NC's 100 counties meet the NCIOM's target. As shown in this figure, seven counties were substantially below target: Anson, **Northampton**, **Franklin**, **Warren**, **Gates**, **Tyrrell** and **Camden**. **Camden** has a population of just over 10,000, and no primary care providers.

The NCIOM definition of primary care clinician includes physicians, nurse practitioners (NPs), physician assistants (PAs) and certified nurse midwives (CNMs).

Physicians per 10,000 Population by County, North Carolina, 2019

Profession Demographics for Hyde County

**SHEPS HEALTH
WORKFORCE NC**

Notes: Data include active, licensed physicians in practice in North Carolina as of October 31 of each year who are not residents-in-training and are not employed by the Federal government. Physician data are derived from the North Carolina Medical Board. County estimates are based on primary practice location. Population census data and estimates are downloaded from the North Carolina Office of State Budget and Management via NC LINC and are based on US Census data. Source: North Carolina Health Professions Data System, Program on Health Workforce Research and Policy, Cecil G. Sheps Center for Health Services Research, University of North Carolina at Chapel Hill. Created August 29, 2021 at <https://nhealthworkforce.unc.edu/interactive/supply/>.

As shown in this figure, the number of physicians per 10,000 population in Hyde County has increased from 1.72 physicians in 2000 to 1.93 in 2019 which is much below the state rate of 24.3 per 10,000 population.

Source: North Carolina Health Professions Data System, [Program on Health Workforce Research and Policy](#), Cecil G. Sheps Center for Health Services Research, University of North Carolina at Chapel Hill. Created September 29, 2021, at <https://nhealthworkforce.unc.edu/interactive/supply/>.

Analysis of Clinical Care Profile

The rate of individuals aged 0-64 years old that have health insurance coverage in Hyde County is 4.5% lower than the rate for North Carolina and 4.2% lower than the Health ENC region with nearly 18% of the population being uninsured. In Hyde County, 16.4% of the population report receives health insurance coverage through Medicaid, 3.6% Medicare and 0.8% Tricare. The percentage of those that receive health insurance through Medicaid and Tricare are higher in Hyde County than N.C. and the Health ENC Counties while the percentage of those receiving Medicare is lower in Hyde County comparatively.

Hyde County is close but does not currently meet the NC Institute of Medicine's (NCIOM) target ratio of 1 primary care provider to every 1,500 people. The number of physicians per 10,000 population in Hyde County has increased 12% from 1.72 physicians in 2000 to 1.93 in 2019 but is still below the state rate of 24.3 per 10,000 population.

Chapter 5 Chronic and Communicable Disease Profile

Leading Causes of Death

Hyde County				North Carolina				Health ENC Counties

Top Ten Reportable Communicable Diseases

Note: To view and compare communicable disease rates in your county with NC State-wide rates, reported number of cases, etc., view the custom dashboard

<https://NCD3NorthCarolinaDiseaseDataDashboard>

- Preventing and controlling the spread of communicable diseases are a top concern among communities.
- The top communicable diseases as reported by NC DHHS in Hyde County in 2018 are shown above.
- Chlamydia ranked highest among percent of cases reported. Chlamydia is a common STD that can infect both men and women. It can cause serious, permanent damage to a woman's reproductive system.

Communicable case counts and rates at the state and county level can be found by following the weblink in the slide.

Analysis of Chronic and Communicable Disease Profile

The leading causes of mortality in 2019 in Hyde County were Cancer with a rate of 263.32, followed by Heart Disease (222.81), Alzheimer's Disease (162.04), Other unintentional injuries (121.53), and Chronic Lower Respiratory Diseases (101.28). Many of these chronic conditions death rates are higher than the state and the Health ENC County Region rates.

The leading cause of Injury Death for Hyde County in 2016-2019 was Poisoning, followed by Fall – Unintentional, and MVT – Unintentional. The leading causes of Injury Hospitalization for the same time period was Fall – Unintentional, followed by MVT – Unintentional, and Poisoning- Unintentional. The leading Causes of Injury ED visits were Fall – Unintentional, Unspecified-Unintentional, and MVT – Unintentional.

In 2018 Chlamydia was the number one reportable communicable disease in Hyde County, comprising half of all reported cases. This is followed by Campylobacter infection at 13.89%, Hepatitis C – Chronic at 11.11%.

Chapter 7 County Health Ranking Indicators

Population Health Model

The County Health Rankings are based on a model of community health that emphasizes the many factors that influence how long and how well we live. The Rankings use more than 30 measures that help communities understand how healthy their residents are today (health outcomes) and what will impact their health in the future (health factors). Explore the Model to learn more about these measures and how they fit together to provide a profile of community health

- There are many factors that influence how well and how long people live.
- The *County Health Rankings* model (right) is a population health model that uses data from different sources to help identify areas of concerns and strengths to help communities achieve health and wellness.
- The Rankings provides county-level data on health behavior, clinical care, social and economic and physical environment factors.

Chapter 8 Survey Findings

Quality of Life Ranking

The graph above shows the list of community issues that were ranked by residents as most affecting the quality of life in Hyde County. Low income/ Poverty was the most frequently selected issue and was ranked by 73.6% of survey respondents, followed by Drugs (Substance abuse) (48.1%). Survey respondents ranked Lack of Community Resources (42.3%) as the third issue most affecting quality of life in Hyde County.

Supporting a Safe and Healthy Lifestyle

The graph above shows how people responded to certain questions when asked about how they feel or view issues that support a safe and healthy lifestyle in their county. More than 50% of people Agreed or Strongly Agreed that Hyde County is a good place to raise children and that Hyde County is good place to grow old. More than 70% of people either strongly disagreed or disagreed that there is plenty of economic opportunity in Hyde County. Most respondents believe that Hyde County is a safe place to live. More than 60% of participants disagreed or strongly disagreed that Hyde County has affordable housing that meets their needs, Hyde County has good parks and recreation facilities, and that it is easy to buy healthy foods in Hyde County.

Community Improvement and Education

Respondents were asked what they felt are the top 3 services that need the most improvement in their community. 50% of respondents said culturally appropriate health services, followed by availability of employment (34.6%), and higher paying employment (33.2%).

When asked about the top three health behaviors that they felt people in their community needed more information about, the majority of respondents replied with substance misuse prevention (29.8%), followed by Exercising/fitness (27.4%). 26.4% of respondents replied with both elder care and managing weight as the third most identified health behavior.

COVID-19

The COVID-19 Pandemic has had a significant impact on the residents of Hyde County. Respondents were asked several questions about COVID-19. The graph above shows the responses of participants asked to select the 3 tops areas where COVID-19 has impacted them the most severely/significantly. The majority of participants (59.5%) responded that stress and anxiety has impacted them the most severely/significantly followed by social isolation (45.4%) and mental/behavioral health.

This community survey question asked people if they had received a COVID-19 vaccine.

Between April 1 and June 30, 2021, nearly 67% of participants reported being vaccinated for COVID-19, while 31% had not been vaccinated.

If respondents did not get their COVID-19 vaccine, the majority of respondents, 65.1%, cited personal preference as the reason followed by needing more information or having question (14.3%) and other reasons (11.1%).

Health Behaviors and Perceptions

Most respondents receive their health information through a doctor or nurse (59.6%) followed closely by the Internet (56.3%) and then friends and family (37%).

Of the listed preventative services 66.8% of respondents received a blood pressure check in the past 12 months, with 49.5% receiving a dental cleaning/x-rays, and the same percent receiving a physical exam.

When asked about physical activity most participants reported that they do not engage in any physical activity or exercise that lasts at least half an hour.

**If you do not exercise at least a half hour a few days each week,
please select the reasons why you do not exercise?**

For those participants who do not exercise for at least half an hour a few days a week the top reason as to why not was I'm too tired to exercise with 36.1%, followed by not having access to a facility that has things they need to exercise (29.3%), and not liking exercise (21.8%).

Please select any tobacco product you currently use

When asked about tobacco use 79.7% reported that they do not currently use tobacco products.

Of those that currently use tobacco products:

- 15.2% use cigarettes
- 3% use vaping
- 3% use snuff/dip

Where would you go for help if you wanted to quit?

Participants that currently use tobacco products were asked where they would go for help if they wanted to quit. 33.3% said they would go to the NC doctor, 20% said they don't want to quit, and 16.7% of respondents said the Quit line and I don't know.

During the past 12 months, have you received a seasonal flu vaccine?

60.3% of respondents reported receiving their seasonal flu shot vaccine during the past 12 months.

If you did not get your flu vaccine, why not?

For those that did not get the flu vaccine, 86.6% cited personal preference as the reason as to why not.

Healthcare, Information, and Food access

In the past 12 months, did you have a problem getting the health care you needed for you personally or for a family member from any type of health care provider, dentist, pharmacy, or other facility?

77.5% of respondents said that they didn't have a problem getting the health care they needed in the past 12 months with 18.2% saying that they did have a problem getting needed healthcare.

For those that answered yes to having a problem getting needed healthcare, 42.1% said that they had trouble getting healthcare from a Primary Care Doctor, 39.5% said from a specialist, and 34.2% from a dentist.

28.2% of participants identified that they couldn't get an appointment as the main problem that prevented them from receiving necessary healthcare. 25.6% of participants responded with COVID-19, the same percentage of participants also responded with Insurance didn't cover what they needed and no health insurance.

In a natural disaster (hurricane, flooding, tornado, etc.), do you feel like you now how to access or find the information you need to stay safe?

This survey question asked if participants knew how to access or find the information to keep you safe.

87% of respondents said yes that they do feel like they know how to access or find information needed to stay safe.

In the graph below respondents said they get their information to stay safe from television (57.4%), text message (47.5%), and internet (43.2%).

Where do you get your information to stay safe?

In the above survey questions participants were asked in the past 12 months if they were ever worried about whether their family's food would run out before they got money to buy more. 84% said no and 13.4% responded yes.

Demographics

The majority of respondents are aged 60-64 years with the overall age of respondents ranging from 20 – 85+ years.

Most participants identified as White/Caucasian (66.8%) followed by Black/African American (25.5%), and Hispanic/Latinx (2.4%).

English is the primary language spoken at home as shown in the graph above with Spanish and Creole identified as the primary language spoken at home for respondents where English is not the primary language (as shown in the graph below).

Most participants identified their marital status as married (64.4%) followed by Never married/single (16.3%) and Divorced (10.1%).

The highest level of education completed by the majority of participants was equal among three categories, Some college (no degree), Associate's Degree or Vocational Training, and High School graduate (or GED/equivalent), with 19.3% of respondents in each category.

The industry for employment selected by most respondents was Food Service (20%), followed by Student (17.1%), and Retail (14.9%).

Most respondents identified their total household income as \$50,000 to \$74,999 (24.2%) followed by \$35,000 to \$49,999 (18.9%) and \$100,000 or more (11.6%).

The majority of respondents have 2 people living in their household (48.3%) followed by 3 -4 (23.96%), and 17.9% reporting that they live alone.

Regarding employment status most respondents are either employed full-time (40.2%) or retired (30.9%) followed by self-employed (9.8%).

When asked about the type of internet access at home most respondents reported Wi-Fi (65.9%), None (11.2%), and Cellular or Hotspot (10.7%).

Chapter 9 Inventory of Resources

The following is a list of community resources databases:

2-1-1 (Statewide Database)

Chapter 10 Community Prioritization Process

The 2022 Hyde County CHNA Stakeholder Group undertook two phases of prioritization. The first phase began as key stakeholders from Hyde County were convened on November 18, 2021, to review secondary and primary data from the CHA data collection process. Due to COVID-19, stakeholders were given the option to join this meeting virtually. Following the data review and additional discussion, participants were guided through a nominal group technique where a preliminary list of priorities based on the primary and secondary data results was created. In creating this list, the group took into consideration the magnitude of the problem (examination of the data), as well as the feasibility of addressing the problem (community resources and assets) and the impact that could be made by addressing the problem in Hyde County.

The second phase of the prioritization process involved voting on the top three leading health priorities in Hyde County. As previously mentioned, a virtual meeting option was available for the initial prioritization meeting; however, we wanted to ensure that all stakeholders had the opportunity to participate in priority setting, including those who might have been unable to attend the prioritization in-person (due to COVID-19) or virtually (due to lack of internet access). Therefore, a survey via Survey Monkey was created and distributed on November 22, 2021 and closed on December 3, 2021. The survey contained an introduction describing the purpose and process of priority setting, as well as a link to the CHNA data summary. The survey requested that CHNA Stakeholders rank identified priorities according to 1) magnitude/importance of health issue and 2) feasibility/impact of addressing the health issue. As a result of this multi-step process, Hyde County's health priorities for the next three-year period (2022-2025) are:

1. Mental Health
2. Substance Use
3. Child Abuse & Neglect

Appendix B

HNC 2030 County/State Data

Social and Economic Factors					
Health Indicator	Desired Result	Definition	Hyde County	North Carolina	HNC 2030 Target
Poverty*	All people in North Carolina are financially stable and have lifetime economic prosperity.	Percent of individuals with incomes at or below 200% of the Federal Poverty Level	No data available	31% (2020)	27.0%
Unemployment*	All people of working age in North Carolina have equitable pathway to fulfilling employment.	Percent of population aged 16 and older who are unemployed but seeking work	No data available	6.4% (2020)	Reduce unemployment disparity ratio between white and other populations to 1.7 or lower
Short-term Suspensions	All people in North Carolina are supported by a K-12 educational system that values diversity, equity, and inclusion for its students, faculty, staff, and communities.	Number of out-of-school short-term suspensions in educational facilities for all grades per 10 students	DPI unable to provide update to SCHS	1.5 (2018-2019)	0.80
Incarceration**	North Carolina embraces a fair and equitable justice system, free from racism and bias, where safety is foundational to all aspects of a free society, and all communities are free from harm and violence.	Incarceration in North Carolina prisons per 100,000 population	283 (2020)	288 (2020)	150
Adverse Childhood Experiences	All children in North Carolina thrive in safe, stable, and nurturing environments.	Percent of children who have experienced two or more Adverse Childhood Experiences at or below 200% FPL	ACE's do not have county level data	20.9% (2019/2010)	18.0%
Third Grade Reading Proficiency	All children in North Carolina can discover the joy of reading at an early age and are supported in the home, school, and community to be lifelong readers.	Percent of children reading at a proficient level or above based on third grade End of Grade exams: Proficiency defined as Level 3 or higher	DPI unable to provide update to SCHS	56.8% (2018-2019)	80.0%

Notes for social and economic factor data:

*Poverty and unemployment data come from American Community Survey – one-year estimates. 2020 ACS data are considered experimental and should not be compared to prior ACS data years. ACS data can only estimate county level data for a limited number of counties due to sample size, so 2019 data is reported here at the county level. ACS releases 5-year estimates in March 2022 that will be useful for comparisons going forward.

** Incarceration data should be age adjusted, but 2020 data set is considered experimental and does not include 13 and older population. Prior 2020, the rate is per 100,00 NC population age adjusted.

Physical Environment					
Health Indicator	Desired Result	Definition	Hyde County	North Carolina	HNC 2030 Target
Access to Exercise Opportunities	All people in North Carolina have equitable and adaptive/adaptable access to physical activity opportunities across the lifespan.	Percent of the population living half a mile from a park in any area, one mile from a recreational center in a metropolitan area, or three miles from a recreational center in a rural area	65% (2019)	74% (2019)	92.0%
Limited Access to Healthy Food*	All people in North Carolina have equitable access to affordable, nutritious, culturally appropriate foods.	Percent of people who are low-income that are not near a grocery store	35% (2015)	7% (2015)	5.0%
Food Insecurity**			18% (2018)	14% (2018)	(No target)
Severe Housing Problems	All people in North Carolina have safe, affordable, quality housing opportunities.	Percent of households with at least 1 of 4 severe housing problems	14% (2013-2017)	15% (2013-2017)	14.0%

Notes for Physical Environment data:

* The U.S. Department of Agriculture last updated this measure in 2015.

** Food insecurity added to HNC 2030 because the data are updated annually (with a two-year delay in reporting).

Health Behaviors					
Health Indicator	Desired Result	Definition	Hyde County	North Carolina	HNC 2030 Target
Drug Overdose Deaths	All individuals and families in North Carolina with substance use disorder receive person-centered care incorporating evidence-based behavioral and pharmacological approaches.	Number of persons who die because of drug poisoning per 100,000 population (unintentional poisoning deaths/overdose deaths)	11.60 (2020)	32.50 (2020)	18.0
Tobacco Use*	All people in North Carolina live in communities that support tobacco-free/e-cigarette-free lifestyles	Percentage of high school students reporting current use of any tobacco product		MS: 10.4% (2019)	9.0%
		Percentage of adults reporting current use of any tobacco product	24.8% (2020)	HS: 27.3% (2019) 22.6% (2020)	9.0% 15.0%
Excessive Drinking*	All North Carolina communities support safe and responsible use of alcohol.	Percent of adults reporting binge or heavy drinking	17.3% (2020)	15.6% (2020)	12.0%

Sugar-Sweetened Beverage Consumption*	All people in North Carolina live in communities that support healthy food and beverage choices.	Percent of youth reporting consumption of one or more sugar-sweetened beverages per day	DPI unable to provide update to SCHS	30.1 % (2019)	17.0%
		Percent of adults reporting consumption of one or more sugar-sweetened beverages per day	39.5% (2019)	35.4% (2019)	20.0%
HIV Diagnosis	All people in North Carolina experience sexual health with equitable access to quality and culturally competent prevention, treatment, and management of sexually transmitted infections.	Number of new HIV diagnoses per 100,000 population	0.0 (2020)	12.0 (2020)	6.0
Teen Births	All people in North Carolina live in communities support healthy choices for family planning and have equitable access to high quality, affordable reproductive health services.	Number of births to girls aged 15-19 per 1,000 population	23.8 (2019)	18.2 (2019)	10.0

Notes for Health Behaviors data:

*Adult Tobacco Use, Adult Sugar-Sweetened Beverage Consumption, and Excessive Drinking data are only available as regional data from the Behavioral Risk Factor Surveillance System.

*BRFSS Data for Adult Smoking, Adult Sugar Sweetened Beverage Consumption, and Excessive Drinking are reported for the LHD Region, and is not county level data.

Note: HIV Diagnosis *2020 data should be treated with caution due to reduced availability of testing caused by the COVID-19 pandemic.

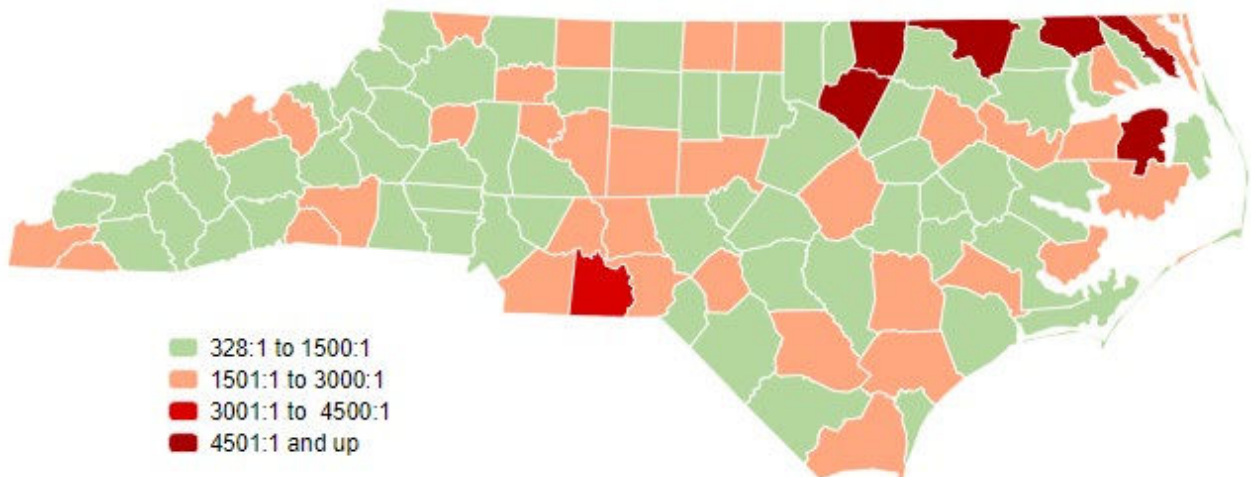

Health Outcomes					
Health Indicator	Desired Result	Definition	Hyde County	North Carolina	HNC 2030 Target
Infant Mortality	All babies in North Carolina are born healthy, thrive in caring and healthy homes, and see their first birthday.	Rate of infant deaths per 1,000 live births	0.0 (2020)	6.9 (2020)	6.0
		Disparity ratio between white non-Hispanic and African American, non-Hispanic infant deaths	0.0 (2016-2020)	2.59 (2016-2020)	Black/White disparity ratio = 1.5
Life Expectancy (years)	All people in North Carolina have long and healthy lives.	Average number of years of life remaining for persons who have attained a given age	75.6 (2020)	76.4 (2020)	82.0

Notes on Health Outcomes:

*Disparity ratio – Rates based on less than 10 deaths are unreliable and should be interpreted with caution. Source: NC Department of Health & Human Services State Center for Health Statistics, 29NOV2021. See table on website for more information.

<https://schs.dph.ncdhhs.gov/data/vital/ims/2020/2020-IMR-TABLE3b.html>

Clinical Care					
Health Indicator	Desired Result	Definition	Hyde County	North Carolina	HNC 2030 Target
Uninsured	All people in North Carolina live in communities with access to comprehensive, high quality, affordable health insurance.	Population under age 65 without insurance	No data available	12.9% (2020)	8.0%
Early Prenatal Care	All birthing people have healthy pregnancies and maternal birth outcomes.	Percentage of women who receive pregnancy-related health care services during the first trimester of pregnancy	75.7% (2020)	73.1% (2020)	80.0%
Suicide	All people in North Carolina live in communities that foster and support positive mental health.	Age-adjusted number of deaths attributable to self-harm per 100,000 population	N/A (2020)	13.3 (2020)	11.1
Primary Care Clinicians (Counties at or below 1:1500 providers to population)	All people in North Carolina live in communities with access to comprehensive, high quality, affordable health care.	Primary care workforce as a ratio of the number of full-time equivalent primary care clinicians to county population (primary care provider to population ratio)	See map below		25% decrease for counties above 1:1500 provider to population
